PROFILE

Product Management/Product Analyst with hands-on experience in guiding AI products from customer discovery to launch. Demonstrated ability in product decision-making through user interviews, feature prioritization, and go-to-market strategies, exemplified by the rapid development of Mira, an AI voice receptionist. Previously co-founded Sero, recognized at Google's Techstars Startup Weekend, and contributed to AI pipeline architecture at an AI startup. Seeking roles in Product Management or Product Analysis within AI-focused companies.

EXPERIENCE

Mira — Co-Founder & Product Lead | [Mira \(Live\)](#)

May 2026 – Present

- Identified an underserved market in Indian short-term rentals and defined the **product strategy** for an AI voice receptionist supporting **Hinglish conversations**, **WhatsApp-native workflows**, and **autonomous guest support**.
- Conducted customer discovery with a Goa Superhost managing 14 Airbnb properties, translating guest call patterns into the **product roadmap**.
- Prioritized WhatsApp post-call summaries as the first **trust-building feature** and converted the customer into both a **design partner** and prospective **angel investor**.
- Made the product decision to replace Vapi with a self-hosted **Pipecat + Sarvam AI stack** after modeling unit economics, reducing **voice infrastructure costs** by 5× while bringing **end-to-end call latency** down to 800-1000 ms.
- Built the **GTM foundation** by sizing the Indian Airbnb Superhost market, identifying Goa as the launch market, and defining an **expansion strategy** across India's highest-density short-term rental regions.
- Shipped an end-to-end **MVP** in 7 days with PSTN calling via Exotel, browser-based demo mode, Airbnb iCal sync, and a **Next.js host dashboard**; validated the product through 60–70 test calls across 4–5 simulated host portfolios to refine **conversation flows** and **operational edge cases**.

Laneway Enterprises — AI R&D Intern

Dec 2025 – Mar 2026

- Shaped architecture decisions across a 5-stage post-meeting AI pipeline, including **MD5 deduplication**, **Faster-Whisper transcription**, **HuggingFace speaker diarization**, and **multi-LLM task extraction** with fallback routing across **OpenRouter**, **Gemini**, **OpenAI**, and **Ollama**.
- Developed **AssistAI**, a RAG-based internal knowledge assistant utilizing **pgvector** that transformed 30–40 meeting recordings into a **searchable knowledge base** for the operations team.
- Created a **Manifest V3 Chrome extension** that captured real-time meeting analytics (camera, mic, speaking times) and integrated **Google Calendar** and **Gmail** via **OAuth 2.0** to automatically surface action items and follow-ups

Sero — AI Sponsorship Marketplace — Co-Founder & Product Lead²⁰²⁴

- Identified the **inefficiency of manual sponsorship outreach** for college clubs and designed an **AI-powered marketplace** to match organizers with relevant sponsors based on event fit.
- Developed product strategy, conducted **market sizing**, performed **competitive analysis**, and crafted **investor storytelling**, assisting the team in securing **Runner-up** at Google's Techstars Startup Weekend among 50–60 participating teams and achieving **pre-incubation** at Atal Incubation Centre MUJ.
- Created the core **matching experience** by utilizing AI to analyze event requirements and sponsor briefs, replacing broad cold outreach with **relevance-based recommendations**.

EDUCATION

Manipal University Jaipur

B.Tech, Information Technology — Graduated Jun 2026

G.E.I's M.H. High School & Junior College, Thane

12th – Science (PCM), 2022

SKILLS

Product Management: Customer Discovery, User Research, Product Requirements (PRDs), Product Strategy, Feature Prioritization, Roadmapping, Go-to-Market (GTM), Market Sizing (TAM/SAM/SOM), Competitive Analysis, Design Partner Management

AI / ML & Data: Agentic AI, Conversational AI, Voice AI, RAG, LLM Routing, Prompt Engineering, AI Evaluation, Workflow Automation, n8n, Make.com

Technical Skills: Python, FastAPI, Next.js, React, Node.js, PostgreSQL, Docker, REST APIs, Cloudflare, Chrome Extensions (Manifest V3)

AI Tools & Technologies: Cursor, Claude Code, Notion, Lovable, Pipecat, Sarvam AI, Groq, OpenAI, Gemini, Hugging Face, Deepgram, Faster-Whisper
